

# PRODIGY\_WD\_01 — Responsive Landing Page

## Task

Create an interactive navigation menu that changes color/style when scrolled or when hovering over a menu item. The nav has a fixed position and is visible on all pages.

## Tech Used

- HTML5
- CSS3 (Flexbox, media queries, transitions)
- Vanilla JavaScript

## Features

- Fixed navbar that changes background on scroll
- Hover effects with animated underline on nav links
- Fully responsive — collapses into a hamburger menu on mobile
- Smooth-scrolling single-page sections: Home, About, Services, Contact

## How to Run

1. Clone this repo
2. Open `index.html` in any browser — no build step needed

## Folder Structure

```
PRODIGY_WD_01/  
├─ index.html  
├─ style.css  
├─ script.js  
└─ README.md
```

---

Task completed as part of the **Prodigy InfoTech Web Development Internship**.
